

Turn your network into long-term income

Bert Energy GmbH offers a worldwide unique franchise model for biogas plants. It enables companies with no biogas background to enter the renewable energy market. Help us find the right partners and share in their success for ten years.

Bert plants process all kinds of biomass: food waste and kitchen waste, all types of slurry and manure, straw and sewage sludge. Directly on the customer's site, they turn waste into gas, electricity, heat, space cooling, refrigeration and a fine, odourless bio-fertilizer.

The standardised, modular **Bert MiraX** Panel-Fermenter allows the industrial series production of biogas plants, much like automobiles. This reduces manufacturing costs and increases sales volumes and market penetration for all participating franchise partners.

Food waste

Kitchen waste

Slurry & manure

Straw

Sludge

Who are we looking for?

Strong local companies that develop the market, install and service Bert plants in their territory. Check your contacts for these profiles:

- **EPC contractors** for environmental or energy plants
- **Wastewater-treatment** providers
- **Environmental engineering** firms

- **Waste-management** companies
- Companies with established relationships in **food manufacturing, catering or hospitality**

Our offer to you

You may know the right people or companies. This knowledge is valuable, and we reward it:

10 years

participation in all franchise fees:
long-term income for you

1 %

of the annual turnover of Bert
plants built in concrete

€2,000–3,000

flat sales commission per MiraX
unit, depending on market and
product

How it works

1

Think about your network:
who could be interested?
Talk to them about Bert.

2

Introduce us and make the
first contact with the
company.

3

You participate once the
company signs a franchise
contract. We sign the
documents with you.
